

Economic Impact Analysis

Economic Impact Studies

can show the effects that an investment or event will have on the local economy.

an addition

of just one job to the iron ore mining industry would generate an additional \$182,954 in local earnings, an additional \$44,015 in taxes paid, and the creation of 3 additional local jobs*

the mining industry

contributed approximately \$525 million to Marquette County's GDP in 2017 and provided 1,159 local jobs*

The LSCP

can help to organize and analyze the necessary information to display the positive influence of your investment.

the number of local jobs created and supported

additional taxes paid to local and state governments

where ripple effects are generated in the local economy

value of volunteer hours worked
